Upper GI Bleeds

(<https://galwayem.ie/index.php/index.php/guidelines/medical-emergencies/upper-gi-bleeds>)

Category

Medical Emergencies (<https://galwayem.ie/index.php/guidelines/medical-emergencies>)

History - please note:

- Co-morbidities especially CCF, IHD, renal, malignancy
- Presence or absence of chronic liver disease
- Alcohol use
- Medications including anticoagulants and NSAIDs

Examination – please note specifically: Postural BP drop Rectal examination findings

Please calculate and record Blatchford Score (see below)

Investigate: FBC, U&E, LFTs, clotting studies, Group and save / cross match

Cross match:

6 units: ?variceal bleed

4 units: fresh melaena on PR, postural drop >15mm Hg, Syst BP <100 mm Hg

G&S: All others

Treatment

- IV access, iv fluids. Patients with cirrhosis should receive ceftriaxone 1g iv.
- Nil by mouth
- Consider urinary catheter
- Seek senior advice if patient > 60 years, tachycardic, postural hypotension or hypotensive.

Admission

- **Stable upper GI bleeds** will be admitted under **medicine** unless by agreement with the surgical and gastroenterology teams.

- **Unstable upper GI bleeds** (systolic BP < 100 on more than 2 occasions or HR >100 after 1l fluid iv) will be admitted under **surgery**.
